Incorrect use of vapor barriers is leading to an increase in moisture related problems.

Vapor barriers were originally intended to prevent assemblies from getting wet.

However, they often prevent assemblies from drying. Vapor barriers installed on the interior of assemblies prevent assemblies from drying inward.

Vapor intrusion is a rapidly developing field of science and policy.

This guidance is intended to aid in evaluating the potential for human exposure from this pathway given the state-of-the-science at this time. MassDEP will continue to study efforts being made to improve the state-of-the-science of this complex exposure
