This 1972 book is a compendium of mathematical

formulas, tables, and graphs. It contains a very complete table of analytical integrals,

differential equations, and numerical series;

and includes tables of trigonometric and

hyperbolic functions, tables for numerical integration, rules for

differentiation and

Mathematical

transcendental
functions. A function

$f(x)$ is said to be
algebraic if a

polynomial $P(x, y)$ in
the two variables x, y

can be found with the
property that $P(x, f(x))$

$= 0$ for all x for which
 $f(x)$ is defined.

Functions that are not
algebraic are called

transcendental
functions.
