How the Liver Metabolizes Drugs. When blood enters the liver via the portal vein, it carries nutrients as well as drugs and other toxic substances the individual may have consumed 1.The liver's job is to detoxify these drugs and remove the byproducts resulting from the process of metabolism 1.. The majority of drugs are fat-soluble, meaning that they are difficult to pass in urine.

### **Drugs and Liver Disease | Signs of Drug-Induced Liver Injury**

Drugs can affect how quickly certain other drugs are metabolized in the liver. If a drug is metabolized more quickly, it may be broken down and eliminated before it can do what it is supposed to do. In slower drug metabolism, side effects are more likely.

These drugs are toxins and may stress your liver. Herbal supplements. How could something natural be bad for your liver? In fact, some common herbs could cause toxic liver disease.

### **Drugs and Chemicals That Cause Toxic Liver Disease**

Drugs may cause fatty liver with or without associated hepatitis. Patients with drug-induced fatty liver may have only a few symptoms, or none. They typically have mild to moderate elevations in blood levels of ALT and AST, and also may develop enlarged livers. In severe cases, drug-induced fatty liver can lead to cirrhosis and liver failure.

### **What Is Drug Induced Liver Disease? Symptoms, Signs & Types**

In liver disease, anesthetic drug distribution, metabolism and elimination may be altered. Uptake and onset of anesthetic drug action is usually unaffected. Hepatic clearance of an agent is dependent upon volume of distribution, functional hepatic blood flow, hepatic extraction ratio and hepatic microsomal activity.
